ANNOUNCEMENTS

Health Nugget
So, What Is Anemia?
Many people use the terms low iron and anemia interchangeably, but they are not the same thing. Iron deficiency means your body doesn't have enough iron available or enough iron stored. Anemia occurs later, when iron stores have become so depleted that your body can no longer make enough healthy red blood cells or hemoglobin to carry oxygen efficiently. Think of it this way:

- Healthy iron stores: Your checking account and savings account both have money.
- Low ferritin (iron deficiency): Your checking account is still covering today's expenses, but your savings account is running low. You may already notice symptoms.
- Iron deficiency anemia: Both accounts have been depleted, and now your body can no longer meet its daily oxygen needs.
